

Plant Finder

Authors: Christian Rios, Landon Rishe, Jackie Schellberg, Abdullah Bueno

Users are interested in learning more about plants they encounter in nature. It is difficult to look up information about plants by their features. Our solution should provide users with a way to easily identify plants by their characteristics and determine whether or not they are safe to touch, eat, etc.

Who is experiencing the problem?

Anyone interested in nature or who finds themselves in the wilderness.

What is the problem?

It is difficult to find information on specific plants based on their features.

Where does the problem present itself?

In nature.

Why does it matter?

Individuals could hurt themselves touching or eating plants that they do not know are harmful. Also, it allows users the opportunity to inform themselves about nature.
